

PSYCHOTRONICS. CONTENT AND PERSPECTIVES

Col. Prof. Constantin TEODORESCU PhD

“Carol I” National Defence University

Judge Emilia IANCU

Sinaia Court of Law

1. Concepts, terms, definitions

In the parapsi literature different authors have defined some terms used in presenting or discussing specific aspects which can help us explain them: the **classical parapsychology and the young psychotronics**. The term paranormal is synonym with parapsychology. The paranormal applies to the phenomenon synonym to parapsychology, something stressing the area of imaginary and miracles.

The term of paranormalogy was introduced by Rech (1969) to define the science of the paranormal phenomena but did not develop (Bonin 1976) **compared to the term parapsychology** which represents a branch of psychology dealing with the human behaviour incriminated in a process which cannot be explained or described in terms of the current physical and chemical principles.

Psi is the general term defining a person's extra sensorial communication with the environment, including the extra sensorial perception psychokinesis (Deale, Wite, 1977). Its generality was achieved by B.P. Wiesner and then R.H. Thoules (1942) who used it either as a noun or an adjective to identify

paranormal processes. We can consider two main **psi** categories: psi-gamma (paranormal knowledge, extra sensorial perception) and psi-kappa (paranormal action, psycho-kinesis). In our opinion, the goal of this term (different from Thalbourne's interpretation 1982) is that to mark the participation of psychic mechanisms either to produce a phenomenon or to receive it. The psi phenomena refer to body-environment interactions which cannot be explained by some authors but which represent the reductionist application of the sensorial and motor channels. Psychotronics represents the term including the theory of faraway interactions linked to an energy form still "unclear", form which belongs to the living matter, between subject and objects (including the living ones) in doctor Rejdak's opinion (1975). Psychotronics is an independent science which deals holistically with the interactions between bodies and the environment (internal and external) and the energy processes which represent the base of these mutual relationships (links). The interactions are achieved among others through forces and agents that don't totally belong to the modern science structure. In Rejdak's opinion (1976), the study of mutual relationships between the **matter's constituents** (substance – energy – information) contributes to a new understanding of man's energy ability, of the vital processes and of matter.

In 1989, The National Association of Psychotronic Research, defining its scientific activity, presented psychotronics as a disciplinary scientific domain studying the faraway interactions between living bodies, respectively between them and the environment and also the energy and informational phenomena linked to the environment and also the energy and informational phenomena linked to these actions.

While parapsychology is considered by some authors as a subject dealing with the paranormal phenomena scientific study, psychotronics is the interdisciplinary scientific domain dealing with the faraway interactions between living systems, respectively the informational one linked to these interactions.

Psychotronics is an independent science between the philosophico-psychological concept of parapsychology and the physico-psychological one about the world, definitions which A. Patrut considers insufficient to stress some differences in the presence of phenomenology, taxonomy, terminology, work methods and the goal of research (1990). Contemporary parapsychology classifies the paranormal phenomena or psi in cognitive and physical corresponding to the two known classes: ESP – extra sensorial perception; PK – psychokinesis. Psychotronics divides the paranormal phenomena into three categories: faraway interactions within the living matter, faraway interactions between living and not living matter, faraway interactions between living matter and the informational field of the environment (notion somewhat unclear and questionable).

2. Psychotronics historical moments

William Crookes, the famous English scientist, founded the modern metapsychics and twenty-five years later, Max Dessoir replaces the old term metapsychics with **parapsychology**.

“Towards the end of the 20th century are formed the first organisms organized in studying parapsychology. In 1982, professor Henry Sidgwick founded the famous “Society for Psychical Research” (SPR) in England. In 1984, the American SPR appeared, then the Boston Society and the International Metapsychic Institute in Paris. In 1924, doctor Eugen Osty was appointed director of the International Metapsychic Institute in Paris and is launched **the parapsychology scientific era**.¹ In 1939, Valentina and Simeon Kirlian obtain by mistake the photograph of a human hand in a high voltage and frequency electrical field (discovering a wonderful bright **aura around** the hand). On 28 January 1971, Stanley Krippner, the president of the American Association for

¹ Emil Streinu, *Psychotronic espionage and the concept of mental fight*, “Carol I” National Defence University Publishing Dept., Bucharest, 2006, p.17

Parapsychological Researches, went to the USSR invited by the Science Academy Psychological Institute in Moscow to gather evidence about the researches in **telepathy, clairvoyance, precognition and psycho-kinesis**. The host was Eduard Naumov, the famous scientist, who, after the visit, was condemned to two years in Siberia by the Court in Moscow for having divulged the secrets of Kirlian photograph to the Americans.

Between 1968-1970, the international community learnt from different sources that the USSR and the East European countries were studying the paranormal phenomena (at Novorosinsk University, Nijinitaghil Pedagogic Institute, Sofia Parapsychology and Sugestology Institute). There were prominent personalities in this field such as: Leonid Vasiliev, Ghienadi Serghiev, Eduard Naumov, George Lozanov, V. Iniusin – becoming living legends in the history of parapsychology. Famous paranormal persons were investigated such as: Djuna Davitasvili (KGB general), Melia Mihaelova, Nina Kulagina or Vanga Dimitrova.

There was a new book in the US “Psychic discoveries behind the Iron Curtain” (by S. Ostrander and L. Shroeder), Englewood Cliffs, New Jersey, Prenticehall 1971.

In 1973, at the International Congress in Prague, the term parapsychology is replaced with **psychotronic** (suggested by prof. Zdenek Rjdak), adopted firstly in order to mislead people but with the purpose of expanding and developing the paranormal domain. Adolf Hitler and Stalin greatly appreciated the parapsychology researches. Nikita Hruscirov had an evil fascination by using paranormal techniques. In 1924, A. Lunaciarski, people commissary for education established the Soviet Committee for the Study of the Paranormal, still functioning these days. At the Sankt Petersburg University, prof. Valentin Vasiliev dedicated his entire activity and life to the study of paranormal phenomena and was fascinated with “the faraway suggestion” and the “zombie-woodo effect”.

“It’s the possibility to be able to influence the human psychic from a distance without the consent of the target subject and most interestingly, without the subject being subject to any conditionings. He succeeds in ordering moves the subject executes unaware of the fact that he obeys orders. This fact opens new perspectives on telepathy which is the ideal technique to manipulate isolate individuals or well established groups”².

The Army and particularly GRU are suddenly interested in this subject and support the researches in view of building mental suggestion and faraway orders devices. Today there are proofs about the existence of these devices and of the fact that they are used in “**psychotronic aggressions**”.

The Americans too launched the program MKULTRA of psychic manipulation by using LSD hallucinogens. They developed PAVLITA psychotronic generators and the effect of the electromagnetic radiations with frequencies lower than 1000 MHz which go all the way to the internal organs and affect the brain.

Between 1975-1977, the Soviets used varied frequency radiations on the US embassy in Moscow. As a result, two ambassadors and two other clerks got cancer. After that, Walter Stoessel, the US ambassador and doctor Robert Becker suggested a new building for the US embassy.

“In 1981, in his book “Excalibur Briefing”, Thomas Bearden, former US army intel officer, introduces the concepts of “**virtual state**” and “**objects of thinking**”³.

The press in the US stated that the US military makes experiments using nuclear weapons and high energy particles of psychotronic waves which would ensure “**the domination of spirit over matter**” – a **psychotronic bomb remotely detonated**.

² Ibidem, p.25

³ Ibidem, p.27

The typical American pragmatism led to a drastic change in attitude towards the prejudices and today paranormal phenomena are studied in great American universities such as: Stanford in California, Harvard in Boston, Duke in Durham, North Carolina.

The motives of this change are:

- First of all curiosity, trait specific to the scientific research but also the people's growing interest for this subject;
- Secondly, the economic component, because paranormal sells well, always and everywhere, even in Romania;
- The therapeutic component starting from the use of plant extracts and also hypnosis through suggestion till the identification of psychosomatic diseases which can be treated with plants.
- The military component is the most important. The researches in North Korea, China, USSR, Cechoslovakia and Bulgaria forced the USA to enter the competition. The psychotronic aggression are part of the asymmetrical aggressions as stated in NATO regulations;
- The growing interest of the terrorist groups and organizations towards psychotronics and the use of specific techniques to prepare and launch the terrorist attacks (see 9/11 2001 and the brain washing of those acting against the twin towers in New York);
- The most important thing is knowing this domain which will unravel the mystery leading to new methods and means to counterattack the psychotronic aggressions.

3. The psychotronic Golgota

The current society is heading towards a controlled society. Due to the informational control abilities all becomes number, information including the most intimate thoughts. An example is the trial John St. Clair Akwei against the

US National Security Agency (NSA) in Fort George Maryland (civil trial no. 92-1449).

John St. Clair Akwei learnt that there were NSA espionage programs from October 1990 to May 1991 whose purpose was to follow and control the American citizens. NSA and the Department of Defense patented digital devices that can analyze from a distance any object with an electrical activity, organic or anorganic.

NASA SIGINT program uses the brain's electromagnetic stimulation in the case of remote neuronal monitoring (RNM) and electronic brain link (EBL). This type of brain stimulation started through the MKULTRA program at the beginning of the 50's. It includes the radiation neuronal control and investigation (un-ionized electromagnetic fields) and also the bioelectrical research. NSA has patented electrical devices which analyze human as well as plants' and animals' electrical activity from a distance. Some examples of unclassified patents from the 80's are:

- US 3951134 – device and method to monitor and alter the brain waves from a distance;
- US 5507291 – method and device to determine from a distance a person's emotional state;
- US 548142 – device to monitor a body's magnetic field;
- US 3837331 – system and method to control a living body's neuronal system;
- US 5213562 – method to modify the mental, emotional and physical states;
- US 3835833 – method to obtain the neurophysiological effects;
- US 5356368 – method and device to induce the wanted conscience states.

These are patents used in the 80's for the CIA research programs for Mind Control. You can imagine what could happens with these patented programs if terrorists get them.

4. Tendencies

The American army has a new **weapon capable to inflict pain remotely** by “expanding” a plasma bubble (electrically charged gas). The energy projectiles weapons will be delivered to the troops starting with 2008 and will reach targets 2 km away.

The infrasound cannon or “the bas cannon” or “the sonic cannon”, invented a few decades ago, has been improved and can now destroy concrete buildings 10 km away from a fixed platform and 8 km from a mobile platform. There are also very powerful oscillation generators with frequency equal to that of the fighter’s heart beat. After resonating with the combatants’ heart frequency, the sonic generator’s frequency decreases gradually to zero leading to the death of the respective person by cardiac arrest. There are numerous researches to develop mind control non-lethal weapons with infra-sounds, microwaves and radio-frequency emitter based on the antenna effect of the human body to 70-100 MHZ frequencies.

The most evil researches are about certain geophysical events: floods, earthquakes, eclipses, comets, hunger and even the Earth revolving unnaturally. Some American specialists state that Earth slows down and changes the frequency of its rotations. “Inversing the Earth’s magnetic poles can lead to the acceleration of the terrestrial time as we approach “ground zero” and we will notice that the 24 hours represent now 16 hours, the difference increases a lot. This theory states that time will cease to exist eventually”⁴.

NASA SIGIND program has patented technical equipment which can analyze remotely the human electrical activity. “The brain map” generated by the NSA computers ensures the ongoing surveillance of all electrical processes in the brain. NSA records and decodes “the brain maps” of hundreds of thousands of persons for national security. The brain stimulation is also used by the military for the brain-computer connections (for combat aircrafts).

⁴ Ibidem, p. 289.

Targeting the electronic surveillance, the electrical activity developed by the speaking control in the brain can render a person's thoughts almost verbally. RNM can send uncoded signals to the auditory cortex in the brain, facilitating the direct audio communication with the brain (without the help of the ears). NSA agents can use this method secretly making the subjects ill by sending hallucinatory sensations to them, specific to the paranoid people. This remote neuronal network in Fort Meade is the most sophisticated and recent espionage and civilian surveillance method. It can send to the auditory cortex whole sentences, tridimensional and subliminal sounds and to the visual cortex RNM images and can alter a person's perceptions, states and move control.

“The contact (bidirectional brain-electronic connection) is achieved by remotely monitoring the brain's audio-visual information at the same time with transmitting the sound to the auditory cortex (avoiding the ears) and fading images to the visual cortex (avoiding the optical nerves and the eyes). The images are bidimensional screens in the brain the bidimensional brain control being one of the most powerful weapons of the CIA-NSA favourite communication system”⁵.

5. Conclusions

21st century wars have left behind the times when soldiers killed one another with all sorts of weapons; there are now much more frightening confrontation methods. It's already known the new **action and mental confrontation environment** used both in the military and civilian life. The psychotronic confrontation is very modern and developing rapidly, the psychotronic war is fought with combatants trained to develop their extra-sensorial abilities.

⁵ <http://www.romfest.org/rost/aug.2004/golgota.shtml>

The paranormal is real, PSI represents the manipulation of the biophysical body connection between the person and the body considered as a system determined by the environment. Man can be regarded as an almost perfect informational system. The psychic energy, once used in curses, is a terrible reality. There is the possibility to see faraway places and also the past and future. In such a context, reality is stranger than fiction. It's time we paid more attention to developing this new mental ability where the target's brain is more important than its clothes (military or civilian).
